The possibility of the State Coastal Zone Cadastre model is considered, on the base of the complex multipurpose investigations within the project “Up-to-date assessment of mineral-resource potential, control over geological hazards and establishment of prediction development models of geological environment in the Baltic Sea and its coastal zone”. The Project was funded by the North-West Department of the Federal Agency on Mineral Resources. The pilot version of the model is presented as the information system “State Coastal Cadastre of the Russian Federation” on the sample of the Russian part of the Baltic Sea.
